

-golang-github-charmbracelet-keygen (0.1.2-1). urllib3 1.23.3-1.Q: Sharing a Visual Source Safe (VSS) database between two local Windows machines I want to migrate from VSS to a more modern VCS. I have all my code and the database backed-up on a NAS device. I want to put all my source code on my desktop PC, and make the database accessible from there. I don't want to share the database files, but I do want to share the entire Visual Source Safe database. What is the best way to do this? A: You should look into using the VSZ connector. You would then be able to store the database in a network location, and access it from your desktop. Q: Installing Private Browsers For Ruby on Rails I recently started using rvm. I have installed ruby 1.8.7 and 1.9.2 on a local machine for development and I am having some issue setting up a private browser (i.e. irb). I have installed the IPython, but I cannot set up a private browser. The terminal output: rails -v Running via Spring preloader in process 5886 /usr/local/lib/ruby/gems/1.8/gems/activerecord-2.3.5/lib/active_support/dependencies.rb:156:in 'load': C:/opt/ruby-enterprise-1.8.7-20091208/lib/ruby/site_ruby/1.8/rubygems.rb:255:in 'activate_bin_path': cannot load such file -- ipython (LoadError) from /usr/local/lib/ruby/gems/1.8/gems/activerecord-2.3.5/lib/active_support/dependencies.rb:156:in 'load' from /usr/local/lib/ruby/gems/1.8/gems/activerecord-2.3.5/lib/active_support/dependencies.rb:521:in 'new_constants_in': undefined local variable or method 'IPYTHON' for main:Object (NameError)
