Category:Microsoft OfficeQ: If a vertex has degree 3 in a finite graph, must it be adjacent to all 3 other vertices? Is it true that if a vertex in a graph has degree 3 , then it must be adjacent to all 3 other vertices? A: Yes, it is true. If a vertex v of a graph G has degree k then by Menger's theorem there is a set S of k vertices that separates v from the other vertices of G . By definition of k -separation, each vertex in S is separated from v by a disjoint set M of $k-1$ vertices. By Menger's theorem there is a path between any two vertices u, v of G . Let $u_0=u, u_1, \dots, u_{k-1}, u_k=v$ be a path in G from u to v of length k and in G
