X-Force 2018 Crack For.(1) Field of the Invention The present invention relates to a position measuring system and a position measuring method, and more particularly, to a position measuring system and a position measuring method which can precisely measure a rotational angle of a rotating body such as a motor. (2) Description of the Related Art In general, when a rotating body such as a motor rotates at high speed, a high voltage is applied to a motor coil, and a magnetic field produced by the high voltage causes a magnetic field to be present in the motor coil. The magnetic field thus caused in the motor coil produces a force that rotates the motor. However, the force produced by the magnetic field depends upon the magnitude of the magnetic field. Therefore, when the rotating body has a great rotational angle, the motor cannot rotate at a constant speed. Therefore, conventionally, the angular position of the motor is detected to detect the rotating angle of the motor. In the case where the rotating body is a motor, a position measuring system that detects the rotational angle of the motor is referred to as a "rotational angle sensor". As an example of such a conventional position measuring system, there is known a two-phase resolver position measuring system. In this two-phase resolver 2d92ce491b
