A new, sensitive, selective and reliable analytical method for the determination of six phthalate esters (PAEs) in food samples has been developed. A liquid-solid extraction (LSE) technique combined with liquid chromatography-tandem mass spectrometry (LC-MS/MS) was used for the analysis. The results obtained by using pressurized liquid extraction (PLE) and LSE methods were compared. The sample (diet) was extracted with ethyl acetate and analyzed by LC-MS/MS. The LSE-PLE method, based on ultrasonic-assisted extraction, was compared to the conventional PLE method in terms of sensitivity and precision. The extraction recovery rates and the relative standard deviations (RSDs) for the six PAEs in fish and shellfish ranged from 85.2% to 102.8%, and from 6.6% to 11.2%, respectively. The limits of detection for the six PAEs were less than 0.02 ng/g in fish and shellfish. The PLE method was applied to analyze 30 standard concentrations and real samples. The recoveries for the six PAEs in real samples ranged from 71.3% to 111.7% with the RSDs less than 12.8%. The LSE-PLE method was found to be suitable for analysis of PAEs in fish and shellfish. The extraction recoveries and the RSDs in terms of the LSE-PLE method were less than those of the PLE method. The LSE-PLE method can be considered as an alternative method for the analysis of PAEs in fish and shellfish.Q: Define Default Parameter Values I am passing a null array as default param to function like so: public void DoSomething(int[] a = null) { // implementation } Is there a way for me to define the default value so that it is 1 instead of null 2d92ce491b
