
Stalin's War: A Radical New Theory of the Origins of World War II

Ernst Topitsch Stalin's War Pdf Download1. English Language Passport ISBN 9781492520725 [44]
Category:1950 non-fiction books Category:History books about World War II Category:Works about Joseph Stalin Category:1953 in Germany Category:1953 non-fiction books Category:German non-fiction booksQ: Focus on an element within the page I'm looking for a way to focus on an element within the document (e.g. the login form). There is a button on the page, and when a user clicks on this button I want to focus on a DIV that would appear in the front of the page. A: Here is a solution to your problem (if I understood it correctly). // Set the buttons to the map's center: `$('#button').click(function() { $('#mymap').css('left', $('#button').offset().left - $('#mymap').width() / 2); $('#mymap').css('top', $('#button').offset().top - $('#mymap').height() / 2); }); // When the map opens, center it on the button: $('#mymap').on('open', function() { $('#mymap').css('left', $('#button').offset().left - $('#mymap').width() / 2); $('#mymap').css('top', $('#button').offset().top - $('#mymap').height() / 2); }); // Let the map open when the #MyLogin button is clicked: $('#MyLogin').on('click', function() { $('#mymap').open(); }); #mymap { height: 300px; width: 300px; } click me This is some content`
