I have one, I think I should check to see how much the CD is worth. I was hoping to just play it on the PC, since I have Lost Chapters on my laptop, which I found a CD ... But in the end I just wanted to play the game. It wouldn't be a PC. So I just went to my desktop and did a boot, and when I went to settings, I did everything I could do to get it, but it wouldn't work. I tried going to the CD, it didn't work, so I used a program that would just download and install it, after that I just ran it and the game didn't show up, so I just started it. It was my first time, so I thought it would just be a game. fffad4f19a
