Home Amma 1.549 Mp4. Comparison of long-term perinatal outcomes in isolated hypoplasia of the aortic arch and associated subclavian artery from a large cohort of patients. The association of low arterial oxygen saturation and persistent pulmonary hypertension of the newborn (PPHN) is well known, but little is known about the use of palliative extracorporeal membrane oxygenation (ECMO) for fetal and neonatal complications of aortic arch hypoplasia. The aim of this study was to evaluate the long-term outcomes of isolated aortic arch hypoplasia (AAH) with and without a concomitant subclavian artery (SA). All neonates with AAH and PPHN who received ECMO at our institution were retrospectively reviewed. Fetal and neonatal aortic arch, pulmonary artery, and subclavian artery echocardiography were reviewed. Long-term outcome data

were obtained from multidisciplinary clinical follow-up and medical records. There were 26 patients with isolated AAH who received ECMO. There was no difference in gestational age at birth or birth weight between those with and without a concomitant SA. Perinatal death rate was significantly higher in those with a concomitant SA (n = 14 [50%]) compared with those without (n = 12 [46%]) (p = 0.027), and there was also a trend toward increased mortality in those with an associated SA 1 (n = 12 [46%]) (p = 0.07). Survival to discharge after ECMO was significantly higher in those with a concomitant SA >1 (n = 12 [46%]) compared with those without (n = 3 [13%]) (p = 0.009). No relationship was found between the degree of smallness of the arch and the presence of an associated SA. In this population, concomitant SA does not seem to affect perinatal survival. However, continued monitoring is needed.[Evaluation of quality of life in patients with gastric ulcer].

Gastric ulcers and duodenal ulcers are chronic diseases and the majority of patients with them need chronic treatment. The purpose of this study was to evaluate patients' quality of life in order to assess the effectiveness of drug therapy in this group. The study included
