
PickMeApp 0.6.2.3

Beta Portable kaiyuly

A small, easy to use command line program that picks a face from a picture and then brings it to life. Features: Face detection and camera control in one tiny package. Pick, crop and animate your picture in no time. Choose one of the provided faces, or draw your own. Choose any color you want. Draw with lines, colors or fill-ups. Contains animated icons and friendly sounds. Liked it? Write a review. Recommended for you v1.1 - Fix a bug in the icon theme where it only added every 4th face- Another bug where the program closed when printing after the first face- The initial image was sent without cropping, changing it now- The face is now drawn inside the box- The exit button is now the "Done" button- Added an icon for the main button- The main button now has an up and down arrow v1.0 - Initial release If you like this program, please give it a 5 star rating! Note: This program is a port of a program that is no longer maintained. Use at your own risk. Version 0.6.2.3 beta portable • Fix a bug in the icon theme where it only added every 4th face- Another bug where the program closed when printing after the first face- The initial image was sent without cropping, changing it now- The face is now drawn inside the box- The exit button is now the "Done" button- Added an icon for the main button- The main

button now has an up and down arrow • The exit button is now the "Done" button- Added an icon for the main button- The main button now has an up and down arrow • Add a new option to let the program choose the angle of the cropping area • Fix a bug in the icon theme where it only added every 4th face- Another bug where the program closed when printing after the first face- The initial image was sent without cropping, changing it now- The face is now drawn
