References Category:Audio softwareQ: Do I need to add a custom post type if I'm using the 'template' shortcode? I'm writing a shortcode for Wordpress and I want to create a way to insert a shortcode into a page template. In order to do this, I've created a custom post type. It appears to be working but I'm a little confused as to whether I need to add a custom post type to the page template. Can someone explain this please? Thanks

```
register_post_type('responsive_images', array( 'labels' => array( 'name' => __( 'Images' ),  
'singular_name' => __( 'Image' ), 'add_new' => __( 'Add New' ), 'add_new_item' => __(  
'Add New Image' ), 'edit' => __( 'Edit' ), 'view' => __( 'View' ), 'view_item' => __( 'View  
Image' ), 'search_items' => __( 'Search Images' ), 'not_found' => __( 'No Images found' ),  
'not_found_in_trash' => __( 'No images found in Trash' ) ), 'description' => __( 'An array  
of images.' ), 'public' => true,
