The present invention relates to a new and distinct cultivar of Mandevilla plant botanically known as Mandevilla hybrid and hereinafter referred to by the cultivar name 'Balsolmandi'. The new cultivar originated in a controlled breeding program in Alva, Fla. during February 2004. The objective of the breeding program was the development of Mandevilla cultivars with a vigorous growth habit and interesting flower and foliage colors. The new Mandevilla 'Balsolmandi' was discovered and selected by the Inventor as a single flowering plant within the progeny of the stated cross-pollination in a controlled environment in Alva, Fla. in April, 2005. Asexual reproduction of the new cultivar by terminal stem cuttings in a controlled environment in Alva, Fla. since July, 2005 has shown that the unique features of this new Mandevilla are stable and reproduced true to type in successive generations.Q: How to identify what arguments a function takes I've got an interesting problem here that is kind of difficult to explain without an example. I have a function: myf ba244e880a
