The answer: Download either the latest version of the game itself or an installer for the game. Q: Can you prove $y = P^2 - 2P \sin(x) + \cos(x)$ to be a solution to the equation? I have the following differential equation to solve: $\frac{dy}{dx} = y \left(\frac{P + \sin(x)}{y} \right)$ I used Mathematica to check that $P^2 - 2P \sin(x) + \cos(x)$ can be a solution, but is there any way to prove that it is one? A: First expand the expression as a power series in x : $P^2 - 2P \sin(x) + \cos(x) = P^2 - 2P + 1 + 2 \sin(x) - 2P \sin(x) + \cos(x)$ & $= P^2 - 2P + 1 + 2 \sin(x) - 1$ & $= P^2 - P + \sin(x) - 1$ & $= (\sin(x) - 1)(P + 1) + (\sin(x) - 1) - 1$ & $= \sin(x)(P + 1) - 1$ & $= \sin(x)(P + 1) - 1$ Note that I used the identity $\sin(x) - 1 = 2 \sin(x) \cos(x)$ in the second step. Now compare the powers of $\sin(x)$ [ba244e880a](#)
