FREE DOWNLOAD Why to update?
Scanito Pro is an efficient and easy-to-use scanning software. It has an intuitive interface. You can customize your scanner's appearance. Also, you can enhance the features of the software. MoreQ: Search results don't display when searching for the name of

a column in a specific table in sql I need to be able to search for a string in a specific column, but whenever I enter the name of the column, no results are displayed. I've tried selecting the column name from another table and was able to search for that, so I know it works. Here's the code: `SELECT * FROM `modifiers` WHERE `Name` LIKE "%Carrier%"` A: Try this `SELECT * FROM `modifiers` WHERE `Name` LIKE "%Carrier%"` Put it inside the quotes like below `SELECT * FROM `modifiers` WHERE `Name` LIKE "%Carrier%"` A: Remove the single quotes around Name and add the wildcard. `SELECT * FROM`

`modifiers` WHERE `Name` LIKE
"%Carrier%" Q: Unity3D / Mono: Is
there any way to check if a DLL is in
use? I'm working on a small plugin
manager for Unity. In it's version 0.0.0
alpha, I need to check that a certain
DLL is installed on the target platform
and is not already in use. This is easy
enough using the ExtensionManager,
but I'd rather not have to include this
extra dependency just for this feature.
Is there any built in functionality in
Unity/Mono that would allow me to
determine if a DLL is currently in use?
Thanks, -Chris A: You can use the DLL
loader in the C# Compiler to check if a
dll is loaded. using

```
System.Runtime.Loader; bool  
isLoading(string dll) { return System.R  
untime.Loader.LoadLibrary(dll)!=  
IntPtr.Zero; } This will return true if  
the dll is in use, else false. A: It seems  
that if you want to do it the platform-  
specific way, you can try this out.
