Note AutoCAD does not support MIGRATE. If AutoCAD does not have an alternative to an imported drawing, then the user is unable to use the drawing. A workaround, however, is to import an entirely new drawing with a higher level of editability. It's a known fact that more and more students will be taking their education online, or even at home. The online world has completely changed the way we learn. Students can go to college from anywhere in the world and learn at the same time, while they're at work. As computers get better and cheaper, they'll only become more accessible and thus, education will move online. However, that doesn't mean people will stop learning. When you take a class online, there is a big chance that you're going to have assignments that require you to do research or something that requires you to go to the library. Online education will create a whole different world that we are all going to have to learn to navigate. Of course, the biggest and most obvious changes are the ones that will happen in the classroom. It's clear that technology will be the driving factor behind teaching. Educators will use online applications like Blackboard, Moodle, and Sakai to teach their classes online. They'll write their lectures in Google Docs and make their assignments in Google Spreadsheets. A whole new world of online learning is just around the corner. Many schools have already been experimenting with online learning. There are a few schools that are almost entirely virtual, such as the New Hampshire Virtual School. 5b5f913d15
