Tam dok nastranja HD Mobilni Glas d.o.o. Cijena 2 + 3 godina - free files. Enjoy a wide range of free online games for PC, gaming consoles and mobile devices. Q: Invoke non-nullable function with nullable return type In C#, I'm a bit confused as to why this is valid: `int? x = 0; bool b =`

`FuncThatReturnsBoolean(x);` Whereas this is not: `int? x = 0; bool b = FuncThatReturnsBoolean(x);` Why is the first working, and the second not? I understand that `int?` is not strictly a nullable type, but is there a specific reason for the behavior? A: `FuncThatReturnsBoolean()` returns a `bool`. Since a `bool` is not nullable, it is not possible for it to return `null`. The C# compiler converts a nullable type to a non-nullable type when doing overload resolution, at the method invocation site: If a method invocation creates a reference type, the nullability rules for that type are applied. In the case of a method returning a non-nullable type, the non-nullability of that type is enough to prevent the conversion of a nullable reference type. If you were to do the same thing with a function returning an `int`: `FuncThatReturnsInt(x)` ...then it would call the overload `FuncThatReturnsInt(int?)` which would return `0`. To make the conversion, it seems like you could make `FuncThatReturnsBoolean()` return a boxed version of the object: `public static bool?`

`FuncThatReturnsBoolean(object obj) { bool? value = obj as bool?; if (value !=`

null) { return value.Value; } return null; } That way when the overload is called, the conversion will be possible. A: Because a bool is a non-nullable value type (as are all primitive types). The compiler will not convert a nullable value type to a non-nullable value type. You can actually use the?. operator to avoid this issue in your example, as such: int?
