uMerge is a very simple program that permits you to merge several files together, deleting the original files after the merge. This program may be used to merge several files into a single file (either'merging' the text of several files into a single file, or instead modifying a single file to create several files, each containing the merged contents of one of the original files), or to operate on a combined file, creating individual files from the combined file, removing the combined file and restoring the original files. uMerge 3.0.3-beta Description: uMerge is a freeware/shareware program intended for merging files or for processing a file and creating individual files from the original. Features: Options for merging many files into a single one or multiple files from a single one (including removing the original file and restoring the resulting files), optionally processing a single file and then creating multiple files from it, copying or creating temporary files, unix shell scripts, and much more. The GUI is very simple to use. uMerge is controlled by a Unix'super-user' by default, but a Windows control panel is included if desired. uMerge does NOT clutter up the registry, and requires no entry in the registry. It runs on all current versions of Windows (since it does not require an installation), and on all current versions of Unix. uMerge is widely used by programs that have a main program, and want to create temporary files to hold the output of their main program. uMerge is used to recombine, modify, and clean the output that they created before deleting the original output file, or to process the temporary file to create the original output file. uMerge is bundled with a 'premium' version that includes an executable that can be used to view the resulting file in a Windows-style editor, and to add scroll bars, line numbers, and bookmarks to it. This executable may be purchased separately and run independently if desired, or alternatively the 'premium' version may be used with the bundled editor to make it fully integrated.
