What's New In?

VCTemp is a simple and easy-to-use program for monitoring the CPU temperature on a remote Windows computer. It uses CoreTemp's API to view the temperatures of all the cores on the remote computer, and will display the results graphically in your desktop. You can view the full CPU temperature graphs, as well as some interesting temperature information, like the CPU and GPU temperature at idle, the temperature at the top of your rig, the temperature of the CPU under load, and how often the CPU throttles. The VCTemp application was developed to be an open-source tool that interfaces with CoreTemp to allow you to view the temperatures on a remote machine. This can be useful to keep an eye on processor temperatures of your rig while fullscreen gaming.
