Amnesia is a cyber-extortion campaign that focuses on locking up infected files and demanding a ransom from the user. If the user refuses to pay the ransom, they are likely to be subjected to further exploits, or some other malicious activity that could result in a loss of data. It's imperative that users remove Amnesia from their systems. Amnesia ransomware is typically downloaded in a mass infection campaign. ### Regional Health Institutes Why Regional Health Institutes?

Provides quality care with lower costs The expansion of health care coverage for services provided through Regional Health Institutes (RHIs) will reduce the cost of care for many Ontarians.
