This application allows you to find information about the loads that you can use in a weapon. By default, you can view information about the caliber, brand, brand name, bullet type, bullet material, bullet weight, powder type, projectile weight, and launch type of a selected load. Another function is to determine the accurate range in which the load is used to fire from (zero range), how to calculate the corresponding velocity, energy, and wind drift. In addition, this tool helps you analyze the trajectory, flatness, and trajectory deviation of the bullets. You can also customize the application's appearance by adjusting the font size and color. Key features: Loads with up to 4000 different loads for rifles, pistols, rimfire, and shotshells. Compatible with any device that has the Microsoft Windows operating system (Windows 95, 98, ME, NT, 2000, XP, Vista, and 7). You can view detailed information about a load, either by clicking on the appropriate image, or by using the search function. You can view a comparison graph that shows the differences in ranges between the target load and other loads. You can view the characteristics of a target load in tabular form. This application lets you configure the appearance of the table with the search results. Search results can be saved in a text file. User can change the text settings for load and/or target. Ricochet, blind, drop, and wind drift diagrams are displayed in tabular format. Rifle, pistol, rimfire, and shot shells are supported.
