SysInfoMyWork Crack+ [Latest 2022]

SysInfoMyWork is a light-weight tool designed to monitor the RAM and CPU usage of your computer. As an add-on to the Windows Task Manager, it offers a simple interface for accessing its main features. It does not need administrator privileges, and you can easily configure it to automatically optimize memory usage, remove unused apps and tweak its settings. The application can be configured to display information about both your RAM and your CPU, as well as the free/used RAM and used/unused CPU. All this comes down to a few simple features that can be configured via the application's interface, including showing of free memory, sorting of memory (RAM or cache), auto-optimization settings, as well as the display of the CPU usage. It's a real pleasure to have a tool like this on your computer, as you can make it do your work while you do something else! For example, you can browse the web, check email or use any other program, while the application keeps an eye on your memory and CPU usage. There are a few problems with SysInfoMyWork, however. The interface for setting the options is quite ugly and doesn't make it easy to find the right settings for your computer. It doesn't offer a whole lot of customization options, while auto-optimization seems to be basic. Most importantly, the application doesn't show the used/free memory or CPU usage. It only shows basic info. Add to that the fact that it doesn't need administrator privileges and that it runs as a service, and you can see why SysInfoMyWork has a lot to do. To make it easier to use, a tutorial is available for downloading, which covers most of its features and configurations. However, even if the app isn't perfect, it does come with a lot of good features that's worth checking out. It offers a free trial version, and there's an option to remove the trial version with the pro version. We definitely recommend it if you want a simple tool to monitor your RAM and CPU usage. Free version of SysInfoMyWork shows memory info. What is new in this release: Added the ability to remove the trial version of the app. What is new in version 2.0.1: Made the application compatible with newer Windows versions. What is new in version 2.0.2:

SysInfoMyWork [32|64bit]

1d6a3396d6
