frozen_string_literal: true module Dcmoodle class Nils 4, 4. Second Lieutenant Howell's progress was slow and tortuous, but it was completed on 26 September 1915. In August 1915 he was sent out to the Gallipoli peninsula where he provided invaluable assistance to the Naval Officer in Charge (NOOIC). He was instrumental in supporting the NOOIC's attempts to construct a mine-field across the Dardanelles. He was awarded the Distinguished Service Order in February 1915. This Medal was signed by the Queen in August 1915. Lieutenant F.H. Rundell was appointed by the Secretary of State for War to act as Consul for the Dominion of Canada and given the rank of Major. He joined the Immingham Submarine E-class on 25 July 1918. In October 1918 the E-class took part in a large scale German U-boat attack on merchant shipping in the North Sea. On that operation Rundell took command of the submarine that was assigned to the attack group. On the way back to Immingham, Rundell's E-class struck a mine and sank. He was one of the 14 crewmen of the submarine to be awarded the Distinguished Service Order. On 1 January 1919 he was promoted to Lieutenant, and commissioned the Submarine G-class. He would be involved in the defence of the North Sea against German U-boats, and was awarded the Distinguished Service Order on 1 July 1920. E-

Progressive Mesh Flattening (PSF) is a plugin to flatten a 3-D mesh or non-developable, i.e. curving surface mesh into a flat 2-D pattern. This tool is ideal for rapid prototyping (3-D CAD tools like Rhino, Sculptiris, XSI, etc.). The tool has a user friendly interface that allows you to flatten meshes with 3 different options. While the first and second options flatten the faces on the axis of the mesh, the last option flattens the faces with different angle increments. The flatten mesh option can be applied to both, curves and surfaces. Flattening a 3-D curve is very easy, although you must press a button. Flattening a mesh Small size of the object, so you need to - improve the performance of the plugin. - introduce a mode enabling to program this tool (option mode, button sequence, etc.) In addition, you can add several options to the plugin to customize them (like the command button sequences, the order of the flatten mesh option, size of the menu, etc.). New features: - Plugin is now more portable, it has been made more expandable, - add an ini (user) file to customize the plugin. - Over time from 1993, only a handful of programs have been developed for smooth or curved mesh flattening, but thanks to the success of Progressive Mesh Flattening (PSF) many new programs have been developed over the past few years. PSF has been adopted by a number of companies as a standard tool for rapid prototyping and design of 3-D object.. PSF is a plugin to flatten a 3-D mesh or non-developable, i.e. curving surface mesh into a flat 2-D pattern.. They do a great job and are super affordable. They charge a flat rate up front, and then charge you by the job after you've done it. (as long as you're within their initial estimate.) They deliver a few days after you've started the job. Overall, really good company, and they rock! You want a tank that can do it all, and the M-1 Abrams is that tank. This is not a tank that you can "buy" a self-contained mission package with, but rather is a fully re-imagined tank. The M-1 Abrams was built for 90's technology, a horrible "wet" paint job, and the need for the US Army to win the Gulf War. While the US Army could have hopped on any of a number of well-known tank manufacturers to produce a tank that would have been technologically and ergonomically superior to the Panther, M-60 Patton, and M-1 Abrams, they chose not to. Instead they designed an industrial strength tank with low maintenance costs, superior armor, durability, and the ability to withstand the worst that the desert of the Gulf had to offer. In addition to modern electronics and armor protection, the M-1 Abrams was designed for maximum firepower and handling. In contrast to the Panther and M-60 Patton, the Abrams features a vertical turret, a large 12.7mm (5/12) caliber main gun, and M72A1 multi-purpose autocannon. In addition to its main gun, the Abrams also has a 360° secondary/recoil-reducing semi-automatic 125mm tank gun, two independent 270° rotating mountings for shoulder-fired anti-tank missiles, and a port-side anti-armor/anti-mine blast shield. The M-1 has the longest range of all US tanks, a class-leading up to 8 minutes, despite a crew of five. As of this time, the M-1 is still the only medium tank in the world capable of firing APFSDS round and penetrating up to 550mm of armor in the front of the turret. More Info: In my own experience, I suggest avoiding the Kata HDS (High Density Silicon) products as they are almost always junk and are more expensive than their competitors. That being said, they offer a better product in terms of material content and performance. Other than that, the proven formulas of previous generations of Kata for some
