Q: How to use fprintf to write big numbers in C I am using C to write my program. I want to use fprintf function to write something like 1234.5678 Is there any way that I can use the '.' as decimal separator in C? I want to use it for displaying big numbers. A: In C, since long is an integer type, you can just use %ld for that: long x = 1234.5678; fprintf(stderr, "%ld", x); If you want decimal, you can use double as well: double x = 1234.5678; fprintf(stderr, "%.2lf", x); Just be sure that fprintf won't be able to write beyond the limits of the long type, otherwise you'll have a buffer overflow. Q: R: Modelling a Continuous Time Markov Chain I'm trying to write a transition probability matrix for a continuous time Markov chain with two states, say  $s(0)$  and  $s(1)$ . The states have different exit rates from  $s(0)$ , such that for any  $s(0)$ ,  $\lambda_{s(0),s(0)} = 2$ , and for any  $s(1)$ ,  $\lambda_{s(1),s(1)} = \lambda$ . The states are only accessible in that order. So I'm thinking of a transition probability matrix of the form: p

monitoring,including SNMP Management. SNMP MIB Browser is a powerful network management tool. It's a complete tool for Network monitoring,including SNMP Management. SNMP MIB Browser is a powerful network management tool. Can be used on the go First of all, the application can be used right after download is done, because it skips you the whole effort of going through a setup process. Moreover, this allows you to use it on different computers directly from a thumb drive, while the target PC's registries remain intact, because they don't need to be modified for things to work. The application takes a few seconds of your time to analyze the SNMP protocol the first time it launches. All variables and notes are shown in a tree view, so you can easily navigate through all items. Upon selection, different value fields display related details like MIB file, OID, syntax, access type, status, as well as a description of the object, where available. Total number of files, memory used, and number of nodes are shown in the status bar. Search, and data gathering tools For thorough analysis of existing data, the application is capable of appending existing MIB files to your project. Currently collected data can also be saved, but not as a type of file you can load later on. However, you start from where you left off every time, so using the program from a thumb drive can keep all data safe in the source directory. In case you're interested in a particular set of details, several search options help you easily identify names of objects, as well as OID instances. When found, the context menu allows you to get associated value, as well as the counter value for a particular MIB definition. There's also a statistics panel which shows all detected MIB definitions, data analyzed, nodes, and connection errors, but with no possibility to save a report. In conclusion To sum it up, network management becomes a little easier with MIB Browser, allowing you to carefully analyze SNMP connections. The visual design is minimalistic, but intuitive enough to quickly spot, or look for data of interest. Although there aren't any export options, data is saved, and you always resume from the last session. Description: Network Management and monitoring is a complicated process.
