Following the rebellion, the Committee made sure that the exact position of the newly created department of the Var

would not lead to the creation of new overseas departments (like Guiana in French Guiana or Louisiana in Louisiana (New France)). The department of the Vaucluse in the Herault domain was therefore named as the department of the Var. "You are asking too much of me, father," Jean-Jacques answered. "I assure you that I have never asked you for anything before. I am asking for a very great thing, yet it has been granted to me. I am no longer a valet, nor yet a valet-de-chambre. I have won a passport into all the cities of Europe; I have landed at Venice and embarked at

Lisbon." [23] From the references made to the newly revised text that appeared in 1791, it seems that, contrary to what is seen in the more readied version, the original text of this speech (published in 1781) read as follows. From the variations between both versions, it seems that it was made intentionally. [Reasons for so.] The recent added chapter itself is not particularly notable. (see text : unimportant mistakes fixed) The play was first staged at the Théâtre Italien, Paris, on 17 December 1797, under the title of Mercadet et Desdouches. The musical accompaniment was

orchestrated by Saint-Saëns. Mercadet is one of Henrik Ibsen's most famous plays, and is now widely studied in drama schools throughout the world. [4] Mercadet is widely recognised as one of Ibsen's greatest plays, and is one of his most performed and taught plays. Bad Crystal (Primary) is a program that helps keep a screen without getting stuck pixels on it, even on displays with an irregular matrix. You'll then also be able to adapt the

color balance of your screen if you use a video card or monitor that's not made of the best materials. The application also features a screen scanner that will tell you if you have a bad display, display card, bad pixel, or an LCD monitor that's not working as it should. The screensaver gets rid of all the bad pixels found on your screen with a few clicks. To do so, the program scans the entire screen and applies a blinking highlight in every pixel that is not perfect. Bad Crystal can also detect if a screen is faulty or not, including a faulty pixel or a burned-in screen. The program will

also locate stuck or dead pixels and they will then be corrected. When you have an LCD screen, it's better to turn off the automatic brightness adjustment, otherwise you risk corrupting your screen. If your LCD screen is damaged, have a bad pixel, or is less than perfect in any other way, you should try to use this smart screen optimizer to correct it for you, as it is capable of locating and fixing stuck pixels on your screen. You can adjust the monitor gamma to make the colors on your screen more accurate or you can use the so-called monitor scaler to boost them up and make the

picture brighter. With the help of the bad primary, you'll be able to maintain the picture on your screen, even if it's a plasma screen. You can also use Bad Crystal to detect and adjust the color balance of your screen if you use a video card or monitor that's not made of the best materials. If you have a faulty display, you can use this software to locate and remove all the

1. Field of the Invention The present invention relates to a method for the determination of an analyte in a liquid sample. The present invention further relates to a device for implementing this method. The present invention also relates to a liquid test strip with

means for determination of an analyte.

2. Description of the Background

A number of tests have been developed for the determination of analytes in biological liquids. One group of such tests is the pregnancy tests. These tests usually consist of a so-called test strip to which is provided an analytical test element (e.g. an antibody-enzyme conjugate). The test element is contacted with the liquid sample to be analyzed. The test element specifically interacts with the analyte in the sample. Depending on the analyte, this results in different types of visual or test-element dependent reactions. The

presence or absence of these reactions is then evaluated by a user of the test strip. The invention further relates to a device for carrying out this method. The device comprises a first test element which is suitable for determining an analyte in a liquid sample, in particular for determining a pregnancy in a human or animal. The first test element is coated with a reagent system capable of reacting with the analyte in the liquid sample. The test element comprises an evaluation circuit which provides, when the test element is contacted with the liquid sample, an output

signal in response to the presence or absence of reactions between the reagent system and the analyte in the sample. The invention further relates to a liquid test strip for carrying out this method, wherein the first test element is able to detect the presence
