------- BibleTime Mini is a small, simple, easy to use application specially designed to offer you a Bible study application. This tool is based of BibleTime and thus it uses the SWORD programming library to work with Bible texts, commentaries, dictionaries and books provided by the CrossWire Bible Society. So, if you were looking for a software to help you read texts from the Bible, take this small utility for a spin and check out if its capabilities are enough to satisfy your needs. - In a nutshell the software does the following: - Read a bible text from a file or from the keyboard - Find a text to study in a dictionary - Use the commentaries you selected as source - If a phrase from a dictionary is found in a text, a link is made to the page where the phrase is defined - If an error is found in a word, it is underlined in the text. You can also choose to remove the erroneous word from the text. - You can highlight a word or an entire phrase in the text and copy it to the clipboard. - There are two color options: one for the background and one for the font colors. - A table of contents is present. - You can bookmark the text you're studying. - Export your study to HTML format with hyperlinks and dictionaries. - Play a random Bible passage. - You can select a book from the database and view a list of chapters with the chapter names or you can view a list of verses with a short summary. - You can view a map of Israel, study a particular book or verse from a map. - You can open the Bible you're reading in another tab and switch between them. - The following dictionaries are supported (there are more coming soon): - HCSB - KJV - HCSB and KJV - NIV and HCSB - NIV and HCSB

Protein-membrane interactions are at the heart of many biological processes, including membrane fusion, cell signalling and viral entry. Our aim is to study these processes on realistic protein and membrane representations at the atomistic or (if necessary) the coarse-grained level of detail. This requires the ability to simulate processes over long timescales and at large spatial scales, which are demanding due to the large number of particles and the complexity of the molecular interactions.
