I am trying to extract some data on a website using python selenium and all of the examples that I have seen are very simple and basic, and yet I keep getting errors. Here is what the webpage looks like: I am trying to get the field names and data for "teamId=17" A: Here's an example of how you can extract it using BeautifulSoup, with the 'team' table that you mention. The team information is available in a single cell. It's not obvious to me why the table has a nested table in the first place, but as it is, this should give you an idea of how to proceed, and not be forced into being specific to a particular website.

```
from bs4 import BeautifulSoup import requests r = requests.get("") html 570a42141b
