Folio is a small application designed to organize files, pictures and videos in a convenient way. It is easy to use, and it has a neat and functional interface. Your files are located in a neat folder structure that is clearly presented in the application's main window. This makes it simple to locate and access the files you need. Your pictures are displayed in a handy slideshow gallery, which can be used to quickly locate any of the pictures you have collected. In this way, you can easily browse through your images. As for your videos, they are organized and displayed in a cool movie player,

where each movie can be viewed or downloaded. Just like the photos, your videos can be accessed and viewed within the slideshow. The slideshow can be paused and resumed at any time. At the bottom of the main window is a set of tools, which lets you preview the files and folders within the application. The main window also allows you to create, edit, delete and organize folders. Just click the create folder button and you are done. If you are organizing or deleting folders, it is easy to rename a folder, as well as to move it to a different location. Simply click on the folder you want to move, select the location you want to move it to and click the appropriate button. Another useful feature of the application is the search function.
