Get hold of real performance and get out of the cut! Real Cut 1D is a fully featured, real-time software for machining parts from linear or 2D and 3D moving components. Instead of wasting time on trial and error or using spreadsheets to calculate optimal cutting points for a given part, use the Real Cut 1D, the most powerful and most efficient solution for machining linear or 2D/3D parts! Real Cut 1D is a suitable application for any cutting-related operations, but is especially well-suited for machining bars, tubes or pipes. The application can calculate the optimal cutting points for any components and can analyze any cutting angle. It can calculate optimal cutting points for whole strips or profiles, or any specific angles. In the free trial version, you can analyze any component, limit the number of parts and the time the tool needs to calculate the optimal solution. You can also save the results for further offline use. Using Real Cut 1D is simple, fast and efficient! Real Cut 1D is highly effective, stable and stable. The cutting program can help you: calculate the optimal cutting points for various components, with the help of a 2D/3D representation of the cut surfaces · calculate the optimal angle for a given piece or profile · analyze any cutting angle and select the most appropriate cutting tools · analyze any material and select the optimal cutting angle · save the calculated points for offline use · optimize the machining process by calculating the optimal cutting points for each part, for various cutting tools · analyze the optimal angle, select the most appropriate cutting tools, and save the results for offline use · analyze various materials and select the optimal cutting angle · calculate the optimum cutting points for cutting parts · select the appropriate machine to cut various materials · calculate the optimal cutting points for every piece or profile · analyze the optimal angle and select the most appropriate cutting tools · save the results for offline use Practice your reading and writing skills in this fantastic game. What's New in the Real Cut 1D?

Real Cut 1D is a handy application that is able to calculate the optimal cutting angle and dimension for certain linear components, such as bars, pipes or tubes. The program can be set to make precise calculations, at the cost of waiting time. Features: Set the cut thickness of a managed component Set the number of pieces to get from a component The optimal cutting angle can be calculated for any component, as long as it can be rotated about Ox, Oy and Oz axes The program can set various settings for each managed component, for a more efficient work Real Cut 1D has a solid technical specification, since it can optimize the use of both manual and automated methods Real Cut 1D has a set of easy to use features, which allow you to optimize work, based on the application's calculations Most importantly, Real Cut 1D can provide an optimal solution for any analyzed part. It can calculate both the optimal cutting angle and cut dimension Download Real Cut 1D Prefer to shop by phone? Simply dial 1-888-907-2900 to speak to one of our products specialists.
