**What's New in the?**

The program includes an application that helps you learn about oxidation and reduction. It builds a virtual electrochemical cell, allowing you to alter cell properties such as temperature, pH concentration and pressure. The half equations of the cell are viewable, and one or more can be balanced by the program. Details about the cell such as electrode, direction of electron flow, and positive and negative can be viewed or hidden. You can make copies of the cells and then paste them to a word processor or printed them directly or save them as a picture file. License: Electrochemical Cells Pro is free for non-commercial use. There is a \$15 commercial use license available. System Requirements: Windows 2000/XP/2003/Vista. MS-DOS/PC-DOS/Win9x/Vista/Win8 compatible platform. The system needs 2.0 GHz or faster CPU, 256 MB of RAM (512 MB recommended). 16 MB of hard disk space. Online Help: More information is available via the online help menu. If you wish to get help, enter 'Edit/Help' in the program menu and the online help will be displayed in the resulting window. Additional information on using the program can be found in the help documents available by clicking 'Help' in the main program menu. Changelog: Version 1.1 Stability was improved by adding a recovery mechanism to prevent catastrophic system crashes. A dialog was added to ask the user if the cell is balanced or not. A dialog was added to report when the cell was balanced, if balanced, or when the cell was not balanced. The program can now be used with MS-DOS by using the following file associations: Filename - Chemical Cells.exe. The program can now be used with Windows 7 by using the following file associations: Filename - Microsoft.Composition\_1.0.exe. Version 1.0 First release of this application.
