Portable FX Batch Compiler License Key Full Free

FX Batch Compiler allows you to compile an effect file into a stand-alone executable file. It uses the compile tool from the DirectX SDK which is included in Windows SDK. This application was created to avoid to download this tool if you want to compile an effect file just to run it. The script files are very simple, every task must contain 3 lines, they are: Task: Name of the task Command line parameters Text to be displayed The second line is optional and should be used if you want to get the tool output. In most of the cases this line will not be needed. The third line is the actual command and is used to execute the FX Batch Compiler. This command is the same as the compiler command included in the DirectX SDK. There are many tasks which you can find in the FX Batch Compiler documentation. Every task contains the parameters that the compiles FX effect files with. The format of every task is as follows: Name Parameters Text Then, if you want to compile a file called MyFile.fx The script file will be as follows: FX Batch Compiler MyFile.fx -o MyFile -d d3d9 -c x -fx Off -psh -rd Off Note the -o and -fx options. -o option specifies the output name of the compiled exe. In this case, the compiled file will be saved as MyFile.exe. -fx option turns on or off the FX features. In this case, the compilation of the file will not be done. You need to compile the FX effects manually, using the fxc tool from the DirectX SDK. The following is a sample script: FX Batch Compiler MyFile.fx -o MyFile -fx On -rd Off This line is the command that will be passed to the compiler if the FX feature is turned on. It should contain the full path of the directory where you want to save the effect file. -d d3d9 -psh

KEYMACRO defines a section of the script. A section can have multiple KEYMACROs. This KEYMACRO is specified by start keyword and end keyword. It can have one or more lines. The first line of a KEYMACRO is '#KEYMACRO' and this line should always be present. Only one section can be defined in the script. There is no limit to the number of lines in a section. Code Sample: KEYMACRO const int c_Width = 8; #KEYMACRO #ASUS #ASUS #KEYMACRO # ASUS #KEYMACRO #ASUS #KEYMACRO When the script is compiled, the compiler will insert the keywords of KEYMACROs to the generated asm code. The following example shows how KEYMACRO and its related commands works together. #KEYMACRO #ASUS #ASUS #KEYMACRO # ASUS #KEYMACRO #ASUS # KEYMACRO - The scope of KEYMACRO is from start keyword to end keyword. The scope can be partial or full. # If scope is partial, "KEYMACRO" keyword is only in the scope. # If scope is full, "KEYMACRO" keyword is included in "ASUS" keyword. #KEYMACRO #ASUS #ASUS #KEYMACRO # ASUS #KEYMACRO #ASUS #KEYMACRO #ASUS #KEYMACRO #ASUS # KEYMACRO - Use the cmd keyword to define a command. The command can have one or more lines. Only one cmd can be defined in a KEYMACRO. # The cmd keyword is followed by params. They are used to pass arguments to the command. The number of params can be any number. # The first line of the cmd is 'cmd' and it should always be present. # The second line is name of the command and it should always be present. # All the lines of the command have to be present. The parameter is the parameter after cmd keyword. #NUMBER PARAMETER #KEYMACRO #ASUS 1d6a3396d6
