Fitted and Unfitted Shapes can be used to create objects. The shapes can be linear, circular, elliptical, polygonal, or composite. (Lines, arcs, surfaces, cylinders, and cones are special cases of lines). The Fitted object can be rotated, scaled, and moved (by dragging the object in space). Fitted objects can be created through the Rulers tool, as well as via the solid modeling tools, the Design Center, and the Attach tool. Similar to the Fitted Shape, the Unfitted Shape can be created via the solid modeling tools, the Attach tool, and the Rulers tool. The New Drawing (N) command can be used to create a new drawing. The Block (B) command can be used to place text, dimensions, images, and symbols on a drawing. The Key (K) command can be used to place an icon on a drawing, and to attach files to a drawing (such as a text file or image). The View (V) command can be used to change the view of a drawing, including viewing the drawing as a separate window. The DXF Viewer (F) can be used to view a DXF drawing as separate windows, or to work with DXF files with the DXF Edit tool. ## System Requirements:

All requirements are estimated for all platforms. Since there are no technical limitations, you will have to choose between waiting for the game, which is certainly not possible for some people, or play on a low-end system. Performance: The game is designed to run on medium to high-end computers with at least an i7 processor and 8 GB RAM. It will run smoothly on a slower computer but may be slightly less responsive. There are 3 steps in the download and installation of a program, which may take some time. Downloads: Download 1
