C-Free Professional is an easy-to-use IDE for C and C++ learners and professionals. It comes with support for multiple compilers such as Digital Mars C/C++, Ch Interpreter and Borland C++ Compiler. Using this application, both C and C++ learners and professionals can make use of various functions that can help them to build their own programs with ease. Since C-Free Professional comes with support for multiple compilers, it can be used in every C/C++ development process. The main window of C-Free Professional is user-friendly and includes almost all commands that a developer can make use of, being divided into well-organized menus and toolbars. The left panel displays various symbols with different icons that help you to locate the caret in the Code editor window. For instance, if you point the caret to a string that needs to be modified and you are not able to identify it anymore because of the long scripts, you can easily choose the proper command or symbol from the left panel and easily navigate to the selected symbol. Moreover, C-Free Professional highlights not only keywords, but also function names, data types and constants. Since it comes with support for GDB and CDB debuggers, the application enables you to insert breakpoints and attach the current script to a process by specifying its ID. Also, you are able to inspect the value of a variable, expression or memory content within a certain address range using the proper options from the Debug menu. What's more, the application provides a mechanism for inserting commonly used scripts and statements into your source code by choosing the 'Insert Code Template' option from the right-click menu. Overall, C-Free Professional is a practical and useful software solution that supports multiple compilers and helps users to build and debug programs effortlessly.
