Version History: 0.00: I was just building a simple front end for ACS Password Guardian, and thought it would be fun to give away a copy to everyone who could grab my RSS feed. So here is the first release of my ACS Password Guardian mod. Requirements: This mod will work with all versions of ACS 2.6+ 1. Field of the Invention The present invention relates to an optical disk. More particularly, the present invention relates to an optical disk that can be reproduced by optical reproduction means, and also enables a high speed seek operation during reproduction. 2. Description of the Related Art Various types of information recording media including optical disks, magneto-optical disks, optomagnetic disks, hologram disks, and the like, have been proposed, and optical disks, in particular, have come into wide use as large capacity information recording media in recent years. FIG. 6 schematically shows a conventional optical disk. The optical disk is of a dual layer type, and an information recording layer 2 for recording information is formed on a substrate 1. An optical disk with a four layer structure is also known. In order to reproduce recorded information from the optical disk, a laser beam for reading signals is applied to the information recording layer. Since the laser beam is applied to the information recording layer from one side of the optical disk, this side is referred to as a "read side", and the other side is referred to as a "write side". The read side is coated with a protection layer 3, and this protection layer 3 is made of a material having a high transmissivity of the laser beam. The protection layer 3 is formed, for example, from a light-transmitting resin, and provided for protecting the information recording layer 2, so that the life of the optical disk can be extended. For the purpose of protection of the surface of the information recording layer 2 and its stability during the manufacturing process and storage, the protection layer 3 is formed on the read side. The protection layer 3 is, for example, formed by spin coating, and a resin with a high light transmissivity such as triacetylcellulose is used as the material of the protection layer 3. The protection layer 3 is formed so as to cover the entire surface of the read side of the
