## LAN Framework [32/64bit]

"LAN Framework" is a powerful software utility that allows you to manage computers from a single computer (server). By using basic LAN feature tools such as LAN/WAN, Firewalls, Network Configuration, Network Servers, etc., you can easily view and manage the computer names, printers, file shares and even active directory object including user details, security settings, connection settings, domain environment, etc. You can easily combine your scripts with the script console. [Active Directory](#) - Your directory with Active Directory information [Dynamic DNS](#) - Allows you to add, renew or remove individual computer DNS records online, automatically, and for free! [Dynamic Host Configuration Protocol \(DHCP\)](#) - Allows you to use your internet connection to connect to your computers on a secure and automated basis. [Web Servers](#) - Allows you to create and manage as many web servers as you need. [Proxy Servers](#) - Provides the ability to dynamically and easily create and manage secure proxy servers to "out-proxy" the unsecure public Internet. [DNS Server](#) - Provides the ability to create and manage dynamic DNS entries. This makes sure that you get the current DNS information without fail. In addition to its ability to manage computers, you can also manage your printer information. It enables you to view, create, rename, delete, update or check status of printers. Also, it allows you to assign a port number for each print spooler. And finally, it allows you to display the printer status as well as the user that is connected to printer. With LAN framework, you can add your own scripts and tools and LAN Framework provides easy programming environment. Software Requirements [Windows 2000/XP/2003/Vista](#) [Perl](#) [SQL Server](#) [Transmit Server](#) [L2TP VPN Server](#) [Microsoft Outlook Express](#) [WinSCP](#) [TNEF](#) [Aegis Scripting Engine](#) [MS Office Writer 2007](#) [AppleScript](#) [AD Users and Computers](#) [Password Policy](#) [Group Policy](#) [User Accounts](#) [System Notification](#) [Local Security Policy](#) [Security Options](#) [Windows Firewall](#) [User Account Control \(UAC\)](#) [Remote Settings](#) [Printer Friendly](#)
