15-Nov-2012 Multilanguage version! All available languages included from version v17.006+ Here you can download and obtain a free license key for full product key activaQ: How to use 'Where' with LINQ OrderBy I've just started out with LINQ and I'm trying to order the results from a query by the date (only the date is within the query). The following code is what I have now (the DateTime.Minute field is for sorting by the current minute). if (page.IsOptional == true) { var books = db.Books .Where(b => b.Title.Contains(searchText) || b.Author.Contains(searchText) || b.URL.Contains(searchText) || b.DatePublished.Contains(searchText) || b.DatePublished.Minute == DateTime.Minute) .OrderBy(b => b.DatePublished); } In doing some testing I have realized that the date time field isn't being used. How do I get this to work? A: This should work: if (page.IsOptional == true) { var books = db.Books .Where(b => b.Title.Contains(searchText) || b.Author.Contains(searchText) || b.URL.Contains(searchText) || b.DatePublished == DateTime.Minute) .OrderBy(b => b.DatePublished.Minute) .ToList(); } Or to match your original code: if (page.IsOptional == true) { var books = db.Books .Where(b => b.Title 4bc0debe42
