Acyl-CoA dehydrogenase deficiency syndrome is a clinical and biochemical entity that results from mutations of the E2 subunit of the mitochondrial fatty acid beta-oxidation multienzyme complex. Patients may present with both neurologic and hepatic involvement including mental retardation, seizures, episodes of hepatic coma, spasticity, progressive hypotonia, hypoglycemia and muscle weakness. The age of clinical onset in E2-deficient patients ranges from 1 day to 18 years. Gastrointestinal disease has been described in some cases. Most of these patients have demonstrated deficient E2 activity in the muscle biopsy and in fibroblasts, but these levels are typically reduced compared to patients with other clinical phenotypes. There is a need for diagnostic and therapeutic compositions for the treatment of diseases associated with the levels of acyl-CoA dehydrogenase activity.

It's a common problem that many people have with the Blogger's interface — it's not intuitive. But when you use the correct tools, the interface is highly customizable and easy to navigate. These are the Google Drive Tools that we use for blogging and a new user doesn't need to know these tools (they're a bit technical) so you can train them in the basics: word count, basic HTML, RSS, and more. Click here to learn more about these tools. Our focus is on using Blogger, but many of these tools can be used with other blogging platforms (like WordPress). In this post, I'm going to go over the basics of using the Blogger's tools and I'm sure with the help of our supportive community, you'll be able to use them to their full potential.

But the suite of tools that comes with Google Drive are very powerful — in fact, they are almost indispensable. The only thing that's missing is an official "bookshelf" (for viewing and managing your books) and a community-based solution. Note: I'm not affiliated with Google or Blogger (I just like the service). I do use Google Drive to write and post on this site.
