Easy Audio Recording Macro With this plugin you can record, play, loop, stop, and adjust parameters of any selected sound, with the click of a button. The sound you're recording can be set to go off at a certain frame, and you can also have audio to go on for a given number of frames. This allows you to write music that has a constant pitch or sound, even if the frame rate changes. KEYMACRO can also be used as a looping plugin. If you set your sound to go off at a given frame and set a keyframe value of 100 frames, KEYMACRO can play the sound until it reaches the next keyframe. Of course you can set this value to any number, so you can even have loops of an indefinite length. KEYMACRO is very useful when you want to play a long sound (be it a melody or a looped sound) but have to do something else at the same time. For example you want to open a folder while playing a sound. KEYMACRO's intuitive interface allows you to edit the parameters for your selected sound with just a few clicks. It also provides a lot of help messages that will make the whole process even easier.
