## Adaptive Planning Express Crack Free For PC

Adaptive Planning Express (APEX) is an enterprise-class business performance management software solution that enables midsize companies and corporate departments to improve decisions by moving beyond spreadsheets and automating budgeting, forecasting, reporting and analysis. Adaptive Planning Express (APEX) is a web-based solution, making it easy to implement and manage. It is the perfect solution for companies with a small IT staff, but still require business performance management capabilities. The solution includes tools for controlling workflows, security, reporting, and process automation. One of the key features of the solution is a unified, business intelligence user interface that allows you to view, analyze, and model data from across the enterprise, without having to use multiple software packages. Adaptive Planning Express is built around a single set of business intelligence resources and a single pricing model. It can be deployed as a standalone solution or can be integrated with other software to provide a unified platform for enterprise-wide BI. Designed to be scalable, the solution can be purchased and managed as an add-on to existing enterprise applications or as a stand-alone solution. Key features include: Business Intelligence A single business intelligence solution that connects across every area of the company, supporting data from customer contacts, sales, marketing, finance, accounting, human resources, and even more. With Adaptive Planning Express, you can create, report, and analyze data from a single user interface to improve decision making, drive planning, and drive the workflows of every department. Implementing a BI solution is critical to improving a company's ability to make and act on decisions. The decision-making capabilities and insights provided by Adaptive Planning Express can be utilized by all areas of the company, from sales and marketing to finance and human resources. Reporting Not only can you report on data, but you can also model it. With Adaptive Planning Express, you can connect to data and create a process that automates how you manage your data. These models can then be mapped into a reporting interface for easy viewing and analysis. You can easily incorporate information from multiple databases and enterprise applications into a single model. You can also create models that analyze transactions across multiple time intervals, so you can identify trends as they arise. Finance and Accounting When it comes to tracking your finances, Adaptive Planning Express can help you track receivables, expenses, payroll, and more. You can also use the solution to help streamline your company's budgeting

### What's New in the?

Plan your annual budget using Adaptive Planning Express. Create, view, and modify budgets online with secure, encrypted web access. Model events and plan to meet revenue and expense targets. Analyze financial performance and make informed business decisions. Flexible budget rules and budget types allow you to easily enforce budget rules and maintain your financial plan. With Adaptive Planning Express, you can define and control your financial plan in a familiar, spreadsheet-like environment. You can build complete financial reports for any budget type at any point in the year. You can easily create advanced formulae that calculate revenue, expenses, and net-margin targets based on input data. As you build your financial reports, Adaptive Planning Express will automatically render them to a dynamic preview format that is easily edited. View all your forecasts and budget data online, and make informed business decisions using Adaptive Planning Express. FREE Trial Version Full version with no obligation. 90 Days of free download or subscription. How it works In Adaptive Planning Express, financial events are represented as financial rows or columns in a table. Financial rows represent your financial events, such as revenues, expenses, and net-margin. Financial columns represent your forecast values, such as revenue and expenses. You can include other related financial events, such as discounts, return of materials, and bad debts, in your financial rows. Each financial event in your table has its own subrows, called planning cells, which you use to model and forecast a budget. Planning cells have two input values, called plan-in and plan-out, which you can use to model or forecast any financial event. Creating a financial table To create a financial table, follow these steps. 1. Click Financial Tables on the menu bar, and then click New Table. The New Table window opens. 2. The New Table window has an empty table. 3. Click OK. 4. To define a financial event, click a cell in the table. The Cell Properties window opens. 5. Click Define. The Define Cell window opens. 6. In the Define Cell window, enter the name of your financial event in the Name box, and then click OK. The Define Cell window closes. 7. To define a financial column, click a cell in the table. The Cell Properties window opens. 8. Click Define. The Define Cell window opens. 9. In the Define Cell window, enter the name of your financial column in the Name box. For example, enter Revenue in the Name box and then click OK. The Define Cell window closes. 10. To define a financial row, click a cell in the table. The Cell Properties window opens. 11. Click Define. The
