What's New in the?

Crawljax crawls websites that use various technologies such as Ajax, JSP, HTML 5 and CSS3. The software allows you to modify a number of parameters of the crawler and the results of the crawlers on the basis of which you can create a number of reports. Some of the parameters that can be set using the Command Prompt window are: the number of requests made to the server (Up to 5000); the number of requests per seconds (up to 1000); the number of the areas to crawl (only the Root directory, Sub-directories, sub-subdirectories, or all the areas); the crawl depth; the time interval during which the system should work; the total number of pages, documents, files that must be crawled; the number of threads used by the system; the number of frames to ignore; the plugin that you want to use (you can add more than one) and the plugin that will be used when a frame is not available. You can also generate reports using the Crawljax Command Prompt. Crawljax can show a number of reports for your crawler including performance reports, the number of pages crawled, documents and files crawled and the crawl depth. It can show other statistics such as the speed of the crawler, the number of plugin switches and so on. The user interface of Crawljax allows the users to easily control the parameters of the crawler. You can configure the crawler using the Options tab and the Crawler tab. For more details about the crawler parameters, please refer to the specification on the Homepage of the product.

File Description: File Name: Crawljax-2.1.25.jar File Size: 1.29 MB File Version: 2.1.25.01 Archive File Name: Crawljax-2.1.25.jar File Version: 2.1.25.01 Archive Size: 1.14 MB File Date: 2013-05-19 I am trying to crawl 1000 ajax based websites using the crawljax command prompt but
