the worm and all of its components. You can easily obtain the registry key that you need to delete. The file will be in the system registry, and you'll be able to locate it by searching for the word 'Mydoom' under the 'Run' menu. You can also use '%SYSTEM%' and '%ALLUSERSPROFILE%' to search for the file name. The easiest way to remove the worm will be to delete the key, which you can do using the 'Delete'

---

button. Also, it would be a good idea to remove the ‘%TEMP%’ folder as well. It also has to be said that the registry key will be useless if you don’t have the ‘System Restore’ function. This is why you need to remember to use the ‘System Restore’ button.

\* Win32.Mydoom.V@mm Free Removal tool also provides the option to ‘Restore system to a specific date’ which can be useful to resolve any problems in the registry. Besides that, the

---

worm can also make its way in the system BIOS and create a backdoor to your computer. It makes use of 'Shell 1d6a3396d6
