Can you tell more about what you are trying to accomplish by this? I would highly recommend the following program for this kind of monitoring. It is free, and handles many more different scenarios than the current question. A: There are a number of tools out there for monitoring print spoolers. The most popular I think is the "Process Explorer" from sysinternals.com. Process explorer is a useful tool for monitoring various processes. It is not able to detect print spoolers, but if you were to find that the printer spooler is running, you could capture the port name and other useful information using the "Process Properties" dialog of "Process Explorer".
