IAR Embedded Workbench: Help, troubleshooting and more Hey folks

I'm new and trying to learn more about embedded c programming. I

have a problem with the iar embedded workbench. After unpacking the sources and reading all the info, I still get a fatal error when I try to compile and debug.

I'm sure I'm doing something fundamentally wrong and would like some help getting my stuff running. You have to download the iar directory somewhere on your

computer and put the iar directory somewhere on your target board (You probably need the arm7tdmi directory). Open the iar directory and copy all of the files into the same directory on your target board. Search the directory for a directory called "Workbench". Inside there is a directory called "c\html" with a file called "index.htm" that you will change with this site, and the program. Instead of the link provided in the index.htm file, you want to link to the latest source for your architecture. You want the text that is "#include " to be changed to the

"architecture" you are programming for. The rest should work fine.

Instead of linking to the "ARM7TLV" directory that I posted on this site, you want to link to the "GCC" directory for the architecture you are coding for. I'm not sure how to link the GCRoot, as I don't have a separate directory like that. *** For more help on the embedded workbench, look at the "problem" forum . into to install it the "software using the board manual" is preinstalled, not to worry after getting the files (translations, gcroot, buildroot, etc.) go in and follow the instructions on

the forum "insides to iar embedded workbench" This site will be worked on by the community. Screw the above, just figure out how to get it to work. cheers You are right, the thread has been forgotten by many and is not available in google search, anyway i followed the instructions given by you and i have installed the workbench, now what's next? And how can I build a project if it's not in workbench directory? Hello, Hi, I am going to be very frank, I was a newbie to embedded 3e33713323
