ObjectARX allows the use of text and curves for embedding drawing information in a DXF file. AutoCAD Architectural Extensions is an architectural version of AutoCAD that was released in 2001. In 2013, AutoCAD Gold (ACG) a collaboration between Autodesk and Arup Group was launched to offer a combined update to AutoCAD, which the developers say enables CAD professionals to work more efficiently, integrate their daily workflows, and work at their highest level of creativity. In 2018, the Autodesk Service Marketplace launched a dedicated app for Microsoft Windows for ArcGIS Pro and ArcGIS Pro Desktop. The service Marketplace app replaces the ArcGIS cloud app, which is now discontinued and is no longer supported by Autodesk. Version history Features AutoCAD has extensive features and capabilities. The main feature of AutoCAD is its 2D drafting and 2D/3D modelling capabilities. In addition, 3D drafting in this version also enables the use of the following features: Modeling: Creating solid models and using the solids editor to modify model geometry Inventories and library databases Coordinate systems Tools: Alignment tools for horizontally and vertically aligning shapes Arc, circle and ellipse tools for drawing simple geometric shapes Feature and annotation tools for drawing and editing features Triggers for automatically computing features and dimensions Camera tools for modelling with the camera Edges and Shading tools for drawing simple geometric shapes Regions for creating complex shapes Features (Planes and Cylinders): Chamfer and fillet tools for modifying the outside edge of geometric shapes Extrude, sweep and extrude with offset and extrude with path tools for modifying the inside and outside edge of geometric shapes Split and merge tools for separating or combining different geometric shapes Extrude with circle tools for modifying the inside or outside edge of a circle Features (Boundaries): Axis lines for defining boundaries Extensions for defining connectors for making one part of a model fit into another Extensions for defining splines and free-hand paths Three types of 3D alignment tools Planes and cylinders Drawing features Two types of views: An Orthographic View: When viewing a drawing or model, the view is perpendicular to the line of sight A Rectilinear view: When viewing a drawing or model, the view is parallel to the 5b5f913d15

If the license key is changed Copy the registry value "Key Profile" from the location HKEY_LOCAL_MACHINE\Software\Autodesk\Autocad\16.0\ to the location HKEY_CURRENT_USER\Software\Autodesk\Autocad\16.0\ If you copy "Key Profile" registry value, you should make sure to copy the entire value. Restart Autocad. If the Registry key "Key Profile" is not changed The key profile is not changed. Make sure that "Autocad 2016" toolbox library is registered. //=====

Additional AutoCAD commands for designers and technicians: Add branch and symmetry (automatic, on-the-fly creation of mirrored drawings). Generate construction plans from architectural drawings (optional). Scale the drawing. Pin point the exact location of every point on every drawing. Eliminate floating symbols. Modify the line style and line width in a drawing without actually modifying the drawing. Show and hide the sheet grid. Create and use the corner guide line (the space you're working in). Send drawings to the cloud. Sync with AutoCAD 2019. Additional AutoCAD functions for designers and technicians: Transfer geometric data from physical 3D models to drawings (such as the location of the edges of a 3D model and where a point lies on that model). Add, move and resize images on the drawing surface. Add multiple item layers to the drawing. Save a series of commands as a macro and run the macro at any time. Object manipulation and workspace navigation: Rotate, scale and flip objects in the drawing. Place objects on the drawing surface. Add objects to the drawing surface and remove them. Quick command for changing the local coordinate system: Change the current drawing unit and coordinate system in the drawing. Bidirectional capabilities: Write code in AutoLISP to import and export data using functions from the language; sending and receiving drawings to and from the cloud. 3D objects: Project and rotate 3D models in the drawing. Create and use solid 3D models with constraints and grips, and perform other 3D operations such as UV mapping and 3D printing. Additional 3D functionality: View/modify 3D models from a computer monitor, as if they were in front of you. Rotate, scale and flip 3D models. Display 3D annotations in a new way. Import 3D meshes from external applications: Import 3D models from external applications to the drawing (such as 3D Studio Max, Unreal Engine, Cinema 4D and many others). Create 3D objects directly from a video file (in AVI format). Create 3D renderings in the drawing. Create or modify a 3D model and import it into the drawing.
