Typical uses RSCAP.EXE is a powerful tool for IT security professionals, as it can scan, detect, and remove potentially malicious software (malware) that is often designed to steal sensitive information. Features RSCAP.EXE contains the following features: Identification: Identifies which version of RSCAP.EXE is installed, and any of the available applications that are installed with it. Detection: Detects the source application of a detected threat that comes in the form of a DLL. Basic Anti-Virus Protection: Detects and removes some of the most common viruses and trojans currently in existence. Advanced Anti-Virus Protection: Identifies and removes specific viruses and trojans, as well as other malware. Intrusion Detection: Uses a combination of behavioral and signature-based detection to identify possible system threats. Rootkit Detection: Identifies whether there are any anti-virus root kits on the machine. Anti-Spyware: Identifies potentially unwanted software (PUA) on the system that may have been installed by the user. Rootkit Removal: Identifies the presence of "antivirus root kits", which are malware packages that cause the anti-virus to falsely identify the software as malware.
