WinDJView is an excellent program that features a user-friendly interface with no complex menu and tabs that might confound users. There are plenty of bookmarks and annotations that can be created and saved; the program can also rotate pages in the DjVu file to improve the text quality. WinDJView Features: Windows 7/Vista/XP compatible Supports both right-to-left and left-to-right text Just like PDF, WinDJView can be used to convert DjVu files into image files or to save the text for later editing We tested WinDJView and there are no bugs. After installing the program, it required no further configuration. We encountered no problems opening or converting DjVu files. Also, when saving DjVu files as PDFs, the resolution of the generated files was good, even at low quality settings. The program works fine on Windows 7. One consequence of the ease of producing digital music and videos is the spread of illegal software or "warez." Much of the attention surrounding warez has been focused on the distribution of such digital media, but much of the same could be said about any type of copyrighted material. For example, online bibliographic databases are largely unprotected, often making it easy to plagiarize a researcher's work. The risk of academic plagiarism is fairly well understood, but the legal concerns go far beyond plagiarism. Copyright infringement is a growing threat to the academic community and a threat to the ability of consumers to readily access and use content. While there is a body of law protecting copyright, many of the rights granted are only as strong as the interests of an established company in protecting their works. For example, there is an existing body of law protecting the rights of performers, but only so long as the performer has a contractual agreement with a record label. In other words, the mere act of recording and selling an album typically grants the record label a legal right to the performers' work. The record label has a similar right to distribute the album and the album's producer may have a copyright on the audio portion of the album. As a result of this complex set of rights, copying an entire album and selling it for a profit is considered a fair use because the performer or

The purpose of this study was to assess the role of quality of life, personal health, social relationships and spirituality in the prediction of self-image in persons living with HIV infection. A cross-sectional descriptive design using a convenience sample of 159 HIV-positive patients was conducted at a large urban HIV specialty clinic. Eighty-four percent of the participants were African American, 59% were single, 20% were unemployed and 36% were receiving disability benefits. Pearson's bivariate correlations were used to assess the strength and significance of the relationships between the variables. Multiple regression was used to predict self-image scores from quality of life, personal health, social relationships and spirituality variables. When self-image is conceptualized as including both cognitive and affective components, quality of life and personal health significantly predict levels of self-image. However, the association between quality of life and self-image was significantly stronger than that between personal health and self-image, suggesting that quality of life may be more important in predicting self-image than is personal health. Of the demographic variables only being single was associated with poorer self-image. The significant predictors of self-image are quality of life and personal health; however, for persons living with HIV infection, these variables are not adequate in predicting
