and column names and field byte sizes should be specified, but column/field lengths may also vary in size row by row. The engine performs SQL keyword/syntax checking using the syntax/keywords list files included. Object names check and object attributes read is performed in the system database files named 123SQL\_db\_1.mar and 123SQL\_db\_2.mar. Database structure allows multiple object browsing. The sorting/searching routines require low machine resources thus meeting most modern PDA specifications and their sources were also published under different names. This project was founded on the authors' unique relational database engine structure design. 123SQL Website: 123SQL How To: - How to use these samples: - For documentation: 123SQL FAQ: - Small FAQ: - General FAQ: 123SQL FAQ: - Small FAQ: - General FAQ: 123SQL Documentation: - Tutorials: - Reference: 09e8f5149f

Table names and column names and field byte sizes should be specified, but column/field lengths may also vary in size row by row. The engine performs SQL keyword/syntax checking using the syntax/keywords list files included. Record IDs or Indexes may be assigned to tables and subroutines. The engine can be used for small/low resource device as a high-performance LAN server. A reading/writing engine that imports and/or exports data (TAB delimited data file). The engine pre-allocates and pre-selects the input lines. Note: source code libraries for the project are also published under other names. Source Code is also a current source of multithreading features, for the time being the project is only single-threaded. 123SQL ===== 123SQL is a small portable sqlsyntax browsing relational database. ### What's New In 123SQL?

The database package contains a database interface and utilities that implement the tables, columns, primary key, foreign keys and views (tables) in the database. The primary file for database specifications is a text file named 123SQL\_db\_1.mar. The 123SQL\_db\_1.mar file contains the system specification that the data will be stored in and the views (tables) that will be implemented in the database. The system specification uses the SQL syntax and programming style to specify system tables, views, foreign keys and primary key, column definitions, system parameters and settings parameters. The HTML tables that display the table structure when the tables are accessed from a database browser are also included in this file. The key to unique searching that does not require stored indexes as in Oracle or MS Access is generated from the primary key column in the first table. The views (tables) should be specified in the system specification file. The views are also displayed in the HTML tables for quick browsing. The tables and columns in the views are specified using the SQL syntax. The following are the SQL commands in this specification: CREATE TABLE CREATE VIEW ALTER TABLE DROP TABLE CREATE INDEX DROP INDEX CREATE FOREIGN KEY DROP FOREIGN KEY DROP VIEW DROP INDEX BULK COLUMNS ALTER TABLE CREATE INDEX DROP INDEX CREATE FOREIGN KEY DROP FOREIGN KEY DROP VIEW DROP INDEX BULK COLUMNS ALTER TABLE DROP TABLE ALTER TABLE CREATE TABLE CREATE INDEX ALTER TABLE CREATE VIEW ALTER TABLE DROP VIEW DROP INDEX BULK COLUMNS ALTER TABLE DROP VIEW ALTER VIEW DROP VIEW DROP INDEX BULK COLUMNS ALTER TABLE DROP VIEW ALTER TABLE CREATE VIEW CREATE INDEX DROP INDEX ALTER TABLE CREATE VIEW ALTER TABLE DROP VIEW DROP INDEX ALTER TABLE DROP VIEW CREATE VIEW ALTER TABLE CREATE VIEW DROP VIEW DROP INDEX BULK COLUMNS DROP VIEW DROP TABLE ALTER TABLE DROP TABLE CREATE VIEW
