Using Photoshop for Beginners Before you dive into learning how to use Photoshop, be aware that you can use two Photoshop programs — Photoshop Elements and Photoshop — for basic editing tasks, and if you have a tablet PC or some other portable device, you can use it as well. But for the most part, learning Photoshop is best done online. Whether you prefer to learn it online or by watching tutorials, you will need the latest version of Photoshop to use its features. You'll also need a background in computers and some knowledge of your digital camera's manual. As with all software, however, Photoshop updates and patches are released on a regular basis. Check with your local computer store to see what the latest version of Photoshop is, and make sure that you're using the latest software to take advantage of any fixes and updates. If you're just starting out with Photoshop, take the extra time to read the book *Creative Black and White Photography* by Bill Frakes; it's a great place to get started. The most important thing is to be patient and learn how to use the program well. Using Photoshop: Basic Editing When you first open Photoshop, you see the main Photoshop workspace and most of the available features on your monitor. See Figure 9-1. You may also see a small preview window in the top-right corner, which can provide a quick view of a few of the images you have loaded into Photoshop. **Figure 9-1:** The main Photoshop window. As with traditional Photoshop, you are allowed to save your image to a variety of formats, such as JPG, PNG, GIF, APNG and PDF, and you can also apply the most common image editing techniques like resizing, cropping and image filter effects. With Photoshop Elements, you can edit your images as the photograph was taken. And with layers, you can add additional effects to your pictures. For example, you can add the filter effects and play around with the settings like brightness, contrast and color mode. However, the quality of the image you are working on can be limited. For instance, you can only edit the pixels using the actual photograph, or you can't create images with virtual canvas or resizing. Most people use Photoshop and Photoshop Elements because they can make their work more professional. They can add custom icons, logos and backgrounds to their images. And in addition to this, they can also create new layouts for their websites. You can choose the language of the interface, create palettes and color schemes, and your changes are saved to your computer. You can also save files to the server, apply the stock images, and also search for places. Before you start using Photoshop Elements, you need to make sure that your computer meets the system requirements. Also, you need to install the latest version of Photoshop Elements. Here, we are going to share 7 best Photoshop elements keyboard shortcuts. You can use the shortcuts using the Control + (PC: Command +) keys. Will there be more attacks in the United States in 2018, and who will be the targets? So far this year there have been 23 major attacks in the US, killing 31 people, wounding more than 130, and injuring more than 700. The killers included those who came out of nowhere, stalked their victims in shopping malls, high schools and airports, then shot them for no reason at all. And there was also the story of the son-in-law of a Nebraska man who attacked his own family with a shotgun and then killed himself. A number of these attacks were in a sense “wishful thinking,” as the shooters believed the president to be Muslim. In other cases, the attackers took aim at politicians or the media. Was this year especially active, with a new surge of attacks on US soil? Last year there were 25 major terror attacks in the US, including the mass shooting in Las Vegas in October that left 58 dead and another 525 wounded. The number of major terrorist attacks fell sharply in 2016, from 33, according to the New America Foundation think tank, but rose to 23 last year. And it is, on average, actually pretty normal. There were 102 mass murder attacks in the US in 2016, the highest number since 2008, according to the center for crime analysis and law enforcement. The difference this year, according to the Bureau of Justice Statistics’ annual National Crime Victimization Survey, was that the overall violent crime rate, including assaults and murders, was down by about 5 percent, something that had not happened in almost 20 years. The number of people who were robbed or assaulted actually fell by 9.2 percent. So why were there so many attacks this year? There are three factors that increase the chances of a terror attack, said David Hoffman, a professor of political science at George Washington University. First, there are the perpetrators themselves. Individuals who commit acts of terror are usually less connected to terrorist groups than the people who are being attacked. The second factor is motive. Terrorist attacks are more common in the Middle East and North Africa because these regions contain active terrorist groups and a significant portion of the Muslim population. The third factor, Hoffman said, is that in recent years, the FBI and the Department of Homeland Security have spent more money and effort on national security than ever before.
