from a presentation and make them PowerPoint-ready by using any image format. \* Magica Photo Album is a program that enables you to create photos albums in various designs and save them as formats suitable for presentation. \* Minuit is an image-editing program for the Mac OS that includes a selection, vector tools, effects, and 3-D functionality. \* Pixelmator is a vector-drawing program designed for Mac users. \* SketchSaver is a graphics tool that converts audio files into vector shapes for use in Illustrator and in Photoshop. ## The Importance of Photography Yes, you read that right. Photography. Remember that opening paragraph? Of course you do. Photoshop is the image manipulation program. It's the photo program. Photos are "photoshopped" in Photoshop. It's what

people do with their photography, right? Well, yes and no. In 2013, photography surpassed film as the primary and most popular mode of visual recording. For many, photography has become a part of their daily life. Photos are taken by people all over the world to capture cherished moments and help them remember important events that happened the day before, or maybe the year before. Digital cameras have become so popular because they are inexpensive and relatively easy to use. A digital camera is small, light-weight, and easy to carry. It records photos on a memory card rather than on film, making it easy to take photos without the bulky and expensive film that used to be required. Today, the cameras of choice for most photographers are compact digital point-and-

shoot cameras that are so easy to use and affordable that you might be able to name the brand and model you own! When I started my career as a professional photographer, I didn't have much experience with point-and-shoot cameras. It was in college and

post on Adweek.com, Photoshop is installed on more than a billion devices. The ease with which it can be used. Photoshop's interface and support for using it have undergone several upgrades over the years. Just a few of the reasons that make Photoshop so powerful include: It's not as expensive as other programs. Despite the price tag, Photoshop can be a cost-effective program that will let you make the most of your graphic design, producing great results. Because of its incredible level of power, Photoshop has become the go-to choice for many of the professionals out there. It has become synonymous with high-quality results and a program that is the go-to choice for many. It's not an exaggeration to say that Photoshop has changed the face of the world. If you haven't tried using

---

Photoshop, now is the best time. Other amazing features include: Multiple document support. Photoshop lets you work with multiple documents at a time. You can work on one document while you're working on another at the same time. This means that you can work on two projects simultaneously. You can also save a copy of the document on your desktop, which is essential to protecting the original if you share it online or accidentally delete it. There are many different ways to work in Photoshop. You can create your graphics in a traditional style or you can work as a creative professional and organize your files in a different way that will work better for you. Image creation support. Photoshop has hundreds of design assets available. These include dynamic and interactive icons,

---

logos, stylized imagery, textures, patterns, brushes, and thousands of creative effects that can help you produce some amazing designs. But you don't have to limit yourself to using assets that are included in the program. Photoshop lets you download more than 10,000 free vector assets from the internet. These include some incredible free photo editing software that you can use to convert photos into stunning designs.

Q: Division of non-negative random

---

variables I have  $X$  and  $Y$  which are non-negative random variables. How to show that  $Z=X/Y$  is a random variable and compute  $E[Z]$  if it exists? I tried to take the expectation of the characteristic function and proved that it is a random variable, but I cannot figure out how to compute  $E[Z]$  with the identity  $\mathbb{E}[W/V]=\mathbb{E}[W]/\mathbb{E}[V]$ , because it seems to be trivial to take  $X=V=Y$  and  $W=Z$ . Any hints would be appreciated.

A: Let's suppose first that  $X, Y$  are integrable. By definition, the characteristic function  $\phi$  of  $Z$  is given by

$$\begin{aligned} \phi_Z(\theta) &= E[e^{i\theta Z}] \\ &= E[e^{i\theta X/Y}] \end{aligned}$$

So, to compute the expectation of  $Z$ , we must evaluate the function

---

$f(t) = E[e^{i\theta t}]$  for  $t \in \mathbb{R}$ .  
 This function is differentiable on  $\mathbb{R}$  so that we can simply write  $f'(t) = i\theta E[e^{i\theta t}]$ . In the present case, we have
 
$$f'(t) = i\theta E[e^{i\theta t}] = E[ie^{i\theta t}] = \phi'(\theta)$$
 where  $\phi(\theta) = E[e^{i\theta t}]$  is the characteristic function of  $t$ . We have thus found that
 
$$\mathbb{E}[Z] = \int_{-\infty}^{\infty} t f'(t) dt = \int_{-\infty}^{\infty} t^2 \phi(\theta)$$
