. Visualization inspired by romance novels - pmarreck ===== amid Love this! Funny how random thoughts of flowcharting and making things more organized (like the snapshots!) didn't occur until we'd been making things for a while, at which point we realized what we didn't yet have to make a story on! I also found it fascinating how in the middle I was thinking of this as visualizing the story, so the outlying chapters are indeed dynamic. ------ brett40324 Looks cool! I wonder how it would handle a story that's missing a few chapters. Is there some sort of "no it didn't finish it's chapters" warning? ~~~ pmarreck I'm working on that, the chapter links are early on in the process. I'm planning on being able to tell which chapters are incomplete by having alternate colors for sections of text that haven't been rendered to the final image ------ duiker101 Nice idea, I like the voice of your narrator quite a lot. ------ amelius Not very romantic. ------ pmarreck It's possible I'll redo this as a wordpress theme Q:

Xamarin.Android by default assigns System.Threading.Thread.CurrentThread when calling new. This means that any static or instance fields access are not thread safe in app mode. Xamarin Docs The current thread is the thread that executes the current method as well as any methods that it invokes. I feel this is a bad decision because if someone is not using the dispatcher thread thread-safe it does not matter if the code uses methods or static variables, it will not be safe even in debug mode. This is not a big problem because we use reflection to access static fields, and static calls are by design thread safe. Stackoverflow Question I am using Android Studio and have this problem in my code(non-sense): static void Main(string[] args)
