[Atypical and pleomorphic cases of chronic lymphocytic leukemia]. Chronic lymphocytic leukemia (CLL) is the commonest leukemic disorder in the Western countries. However it represents a large, heterogeneous group of diseases with a variable clinical course. These patients may be subdivided into typical or atypical ones, depending on the most conspicuous features of the disease. Atypical forms may be classified into 3 groups: 1) progressive clinical course with lymphocytosis, plasma cell hyperplasia and a variable degree of immunodeficiency; 2) progressive clinical course without lymphocytosis or plasma cell hyperplasia, and 3) indolent clinical course with stable lymphocytosis. Atypical forms as well as those with progressive clinical course without lymphocytosis or plasma cell hyperplasia (for example progressive lymphocytosis) may be treated according to the conventional approaches used for typical CLL. However, the real role of treatment in the atypical forms is still under discussion. The CLL is usually associated with multiple autoimmune disorders, most frequently primary biliary cirrhosis (PBC). The presence of PBC at the time of diagnosis of CLL significantly increases the risk of fulminant liver dysfunction. Although the treatment of CLL is still based on corticosteroids, CLL-related autoimmune disorders should be treated with specific immunosuppressive therapy. Finally, a correct clinical classification and appropriate therapy will permit to make an accurate prognosis of the disease. Pages Monday, May 6, 2013 Testing the Waters with Pie I love the pie recipe my grandma gave me when I was younger. It's a popular recipe in Trinidad and Tobago, it's called the 'sweet potato pie', and it always makes me feel good when I eat it. It has a kind of tangy pie like flavor, a bit sweet, and usually has chunks of sweet potato. It's a popular dessert eaten all over, with corn meal dough used as a crust. A moment that I used to love was helping my grandma roll out the cornmeal dough, I'd kinda help by dabbing some corn meal on her hands. That memory would slowly fade away as I grew up, especially when I moved to Canada in grade six and the pie makers did not wear aprons when they rolled out the dough. On one of the first days of school in first grade, when I was in the second class teacher's classroom, I

Intravenous methadone therapy does not lead to acquisition of methadone self-administration. Morphine has been shown to be self-administered by rats, dogs and monkeys. Intravenous self-administration of morphine is eliminated in animals treated with naltrexone. In the present study, we administered methadone either by an opiate antagonist or as an agonist to determine its self-administration characteristics. Male Sprague-Dawley rats were implanted with an IV catheter and trained to self-administer 1 mg/kg of methadone base on a fixed ratio 1 (FR-1) schedule. Once daily baseline methadone self-administration was established, the rats were exposed to the following conditions. Buprenorphine (0.3 or 1 mg/kg s.c.) was administered 30 min prior to methadone. This administration of buprenorphine has been shown to be a reliable antagonist of the discriminative effects of methadone. Buprenorphine, at a dose of 0.3 mg/kg, reduced the quantity of methadone self-administered. Both doses of buprenorphine blocked the discriminative effects of the drug, as measured by the reversal of narcotic stimulus to saline. Naltrexone (0.5 or 1.0 mg/kg) administered at one-half the dose of buprenorphine, did not prevent methadone self-administration. At a dose of 5.0 mg/kg of naltrexone the methadone self-administration was not blocked. Mecamylamine (3.0 or 10.0 mg/kg) administered 30 min prior to methadone did not block the drug-produced place preference. These data indicate that methadone self-administration occurs independently of mu-opioid receptor activation. People tell me there's a place on the Appalachian Trail, not far from here, where it's easy to see what happened to the dinosaurs. That's how it's painted, and probably how it looked, too, when they disappeared. It's the place I've been told about. One of the locals described it as "a preserve that has nothing to hide." It's true that there are no footprints in the clay and that no bones, clumps of fossil
