Q: VS 2015, How to set maven 2 to "All Projects", without UI? I am developing a web application using Spring Boot and Maven. I am using Windows 10 and Visual Studio 2015. When I open a project, I can see that the "Maven" option is enabled and the selection of "All Projects". I want to know if there is a way to set maven to "All Projects", without using the menus. A: You can use mvn.bat The mvn.bat script can be found in the bin folder of Visual Studio 2015. If your maven version is 3.x.x or 4.x.x then you should have that file. If not, you may have to install the latest version of maven. Open your project and type : mvn.bat You can use the update command for updating your maven version easily. Open Visual Studio, go to Tools > Options > Projects and Solutions > External Web Tools > Maven Command Line. Enter the update and save the settings. You can now type : mvn.bat -U to update your maven version. If you have another maven installed and you want to use that instead, you can add the above entry to the environment variables. A: I work on a large (500+ projects) maven/maven-apache-maven setup. I tend to avoid updates as a general rule; typically, I will add the venv, install maven, install sbt, and do the other plugin updates where I find them. That said, there's nothing stopping you from manually updating your pom.xml to use a more current version of maven or checking for updates in the Maven pom plugin (actually, several plugins within the plugin). I've just never found a need to do this very often, and I'm sure others might find your approach useful; I'm somewhat more comfortable with the standard Maven binaries installation path than I am with using the install-file / update-file / installation-assembly methods found in other popular build frameworks. Just my subjective view, obviously. A: If you use IntelliJ Idea you can configure project.build.plugins.maven.paths in the run/debug configuration. Then you just need to make sure that Maven is in

What's New in the Adobe Photoshop 2021 (Version 22.1.0)?

Some widgets have options that are only available when you get a Premium Membership. We've split the page into zones! Certain widgets can only be added to certain zones. "Why," you ask? Because we want profile pages to have freedom of customization, but also to have some consistency. This way, when anyone visits a deviant, they know they can always find the art in the top left, and personal info in the top right. Activity I can tell you from the title of this journal, that it is completely within the realm of possibility that I'm going to have to do this more often. I've been trying to put out a finished piece a day and it has been working. However, I can tell you the sketch I do is far from completed. I'm wondering when it will be complete and ready for show off. I have been stuck on a few of my drawing lately. The common theme seems to be 'tire spots'. My studies have taken a turn to manga lately, and I just haven't been able to put it aside. I think I may have to ask myself if I'm truly ready for manga illustrations. I'm not sure if it's anything I'm not willing to give up, or if I'm just getting burned out. Q: How do I set the last modified date of a file using the Shell command? I know that I can do so in batch files by setting the last modified date, but what about the shell command? The closest I found in Google is the mv command, which as far as I could tell doesn't change the last modified date. A: To set the last modified time you can try: touch -- -t "201609010150" file You can use any date that you like, this is "modified today", but according to the manpage: -t The date must be in the current time zone. If the date is an invalid number, it is written to the standard output as a '?' followed by the written date. The resulting file time is currently adjusted to the specified time. v = - 9 0 . 0
