8. Photoshop's `_Film Composite_ (_fx_)` panel can be used to manipulate the individual elements of a raster image. There are a lot of options within this panel, including the ability to change the appearance and transparency of the image. 9. The `_Channels_` panel enables you to edit individual color channels in a raster image (like those discussed in the previous chapter). When a channel is selected, the image will appear in a small box below the panel. The Channels panel is important in that you can often use it to separate images and to add detail to an image. The basic steps are to apply a mask to a selected channel in order to hide elements of the image. 10. The `_Quick Selection_` tool can be used to select a range of pixels from a raster image. The Quick Selection tool enables you to easily isolate and create paths, selections, and masks using different sizes of brush strokes and paths. It also allows you to copy and paste an image. 11. `_Expression_` and `_Blur_` brushes can be used in the `_Brushes_` panel to add effects and blur to the canvas. 12. The `_Warp_` panel can be used to manipulate the pixels in a raster image. It enables you to warping, distorting, and so on, to create interesting shapes and effects. 13. Elements contains a powerful suite of effects that can be applied to an image. From the Styles folder, choose the category that contains the image you want to apply a particular effect to. The `_Effects` panel_ features such as the Bevel/Emboss and Marquee tools, which can add a subtle 3D look to any image. 14. You can use the `_Filter_` panel to further manipulate raster images. 15. The `_History` panel_ is used to undo a move or edit made in the past. The panel also enables you to see what changed (i.e., what you have changed since the image was last saved).
